

RAIL DIESEL CAR -1

NICKEL PLATED ALL BRASS CONSTRUCTION

Production Sample Shown

Undecorated 3 Rail

The Rail Diesel Car (RDC) was built by the Budd Company during the 1950's. RDCs were propelled by a diesel engine under the car body. The RDCs were much more economical than Diesels for these interurban route and can be still be found in operation on tourist lines.

3rd Rail is proud to announce the Nickel Plated Brass, RDC-1. This model boasts two in-truck mounted motors with all wheels driven and sprung for a very smooth and prototypical operation. See though grilles on the roof provide cooling for the diesel engine inside.

These RDC cars come complete with full interior detailing, overhead constant voltage lighting and passenger figures. Passenger doors are also operational.
